Activating Canon Print Studio Pro

Erich S. Lehman - 2024-09-24 - [How-to Articles](#)

To use Canon Print Studio Pro, you will need to set Photoshop to open in Rosetta mode.

1. Make sure Photoshop is NOT running.

2. Go into the **Applications** folder.

3. Open the **Adobe Photoshop 2024 folder.**

4. Select the **Adobe Photoshop 2024.app** and **Get Info (cmnd + i)** to get the Info window for Photoshop. *(see figure 1 below)*

5. Select the checkbox next to **Open using Rosetta**

6. Close this window, and then launch Photoshop.

7. The **Canon Print Studio Pro** plugins will now load.

Please note, this feature WILL eventually be going away when Rosetta is end-of-lifed in a future MacOS Release.

Ps **Adobe Photoshop 2024** 5.39 GB
