Change the PHP Version of our Web Account

Brad Coudriet - 2023-12-01 - Web Hosting

The version of PHP that drives your web account can be changed any time from our **Request Portal**

That setting can be found under your Personal Web account page or from the **Manage** screen of a Group Web account that you manage.

The currently supported PHP versions will show up in the drop-down menu.

We try to keep a wide range of versions as we know sometimes legacy software takes a while to get updated to the latest versions of PHP.

The drop-down in the request portal is always the most up-to-date list of versions that we support.
