## Screen Mirroring Fix – MacOS 15.1.x and above

Erich S. Lehman - 2025-03-26 - *AV and Projection*

ISSUE:

When a user wants to stop screen mirroring to a projector, if they go to Display Settings and press **Stop Mirroring,** this will delete their ability to ever mirror again until the following file (**com.apple.windowserver.displays.plist**) is deleted. The issue started with MacOS 15.1.1.

SOLUTION:

Users can launch **RIT Self Service** and search for **Screen Mirroring Fix.**

Search > Screen mirroring fix

Screen mirroring fix

Removes the /Library/Preferences/com.apple.windowserver.displays.plist file.

Reboot is required after ran.

Run

- This utility removes the
/Library/Preferences/com.apple.windowserver.displays.plist file.
- Reboot is **required** after it has run to implement the fix.

PREFERRED METHOD FOR ADJUSTING SCREEN MIRRORING:

Users should go to the **Screen Mirroring** menu and change the display from here, **NOT** in System Settings panel or from the Displays option in the menu bar.
